How to Change Your cPanel Password

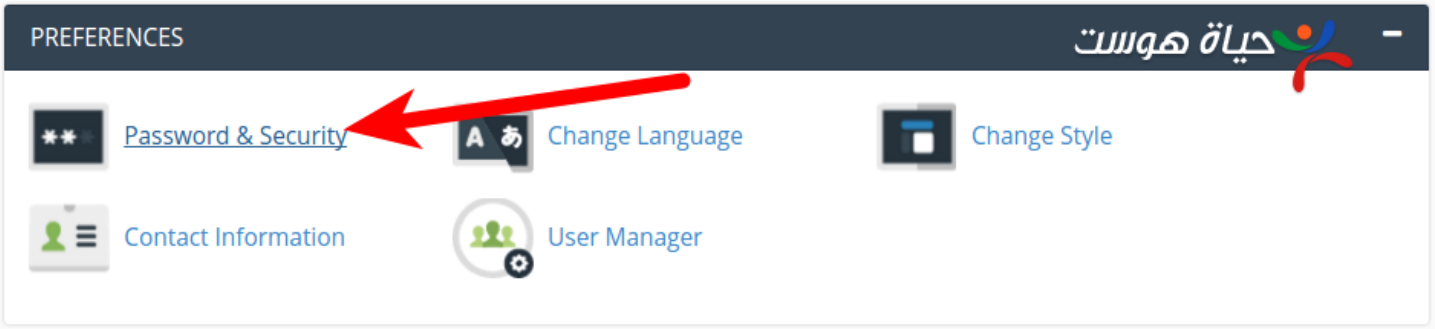

Website control panel (cpanel) · https://www.hyyat.com/en/knowledgebase/change-cpanel-password/

> **In short:** To change your cPanel password: open cPanel, go to Preferences, then Password & Security. Enter your old password, then the new password twice, and click Change your password. Choose a long password with numbers, letters and symbols, and keep it in a password manager.

Changing your cPanel password from time to time helps keep your account secure.

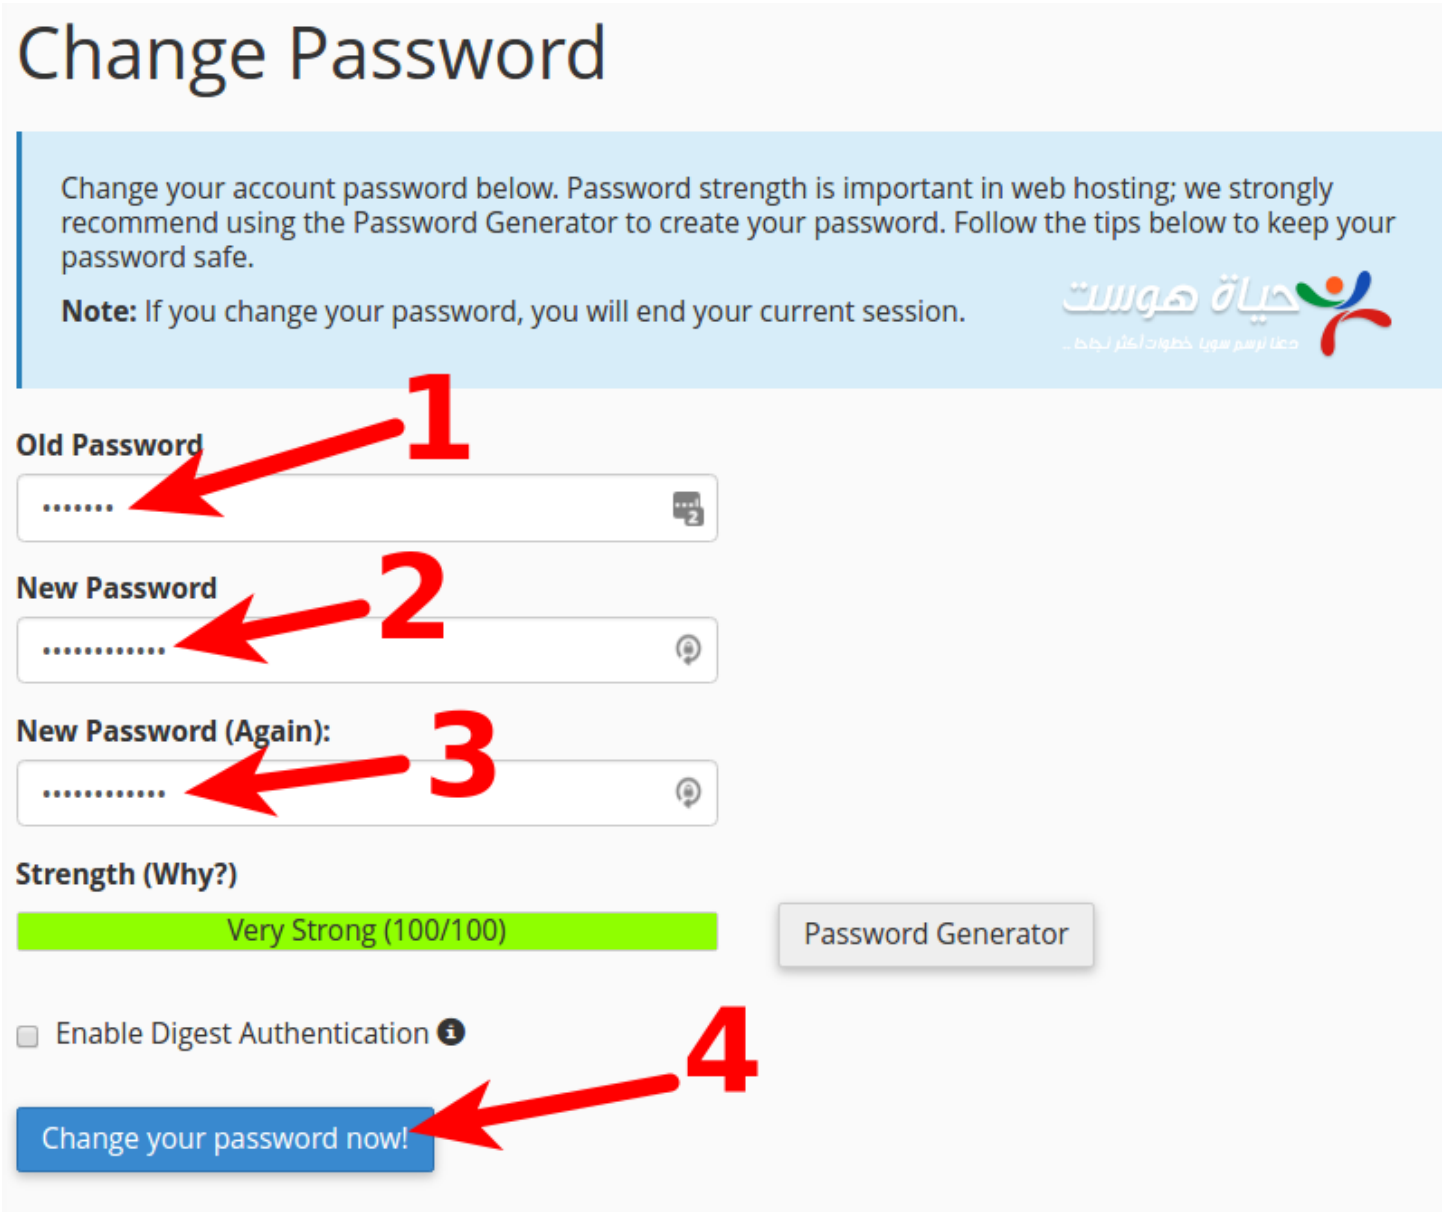

1. Log in to cPanel at **https://yourdomain.com/cpanel** or **https://yourdomain.com:2083**, replacing yourdomain.com with your domain.

2. In the **Preferences** section, click **Password & Security**.

3. Fill in the form:

1. Your old password.
2. The new password.
3. The new password again.
4. Click **Change your password**.

Tips

- Use a long password that is hard to guess, with numbers, letters and symbols. The Password Generator can create one for you.
- Store it in a password manager, not in a plain file or email.
- Do not reuse a password you use on other sites.

Server administrators can also change any account's password from WHM; see how to change a cPanel password from WHM.
