How to Reset Your Cloud Server from the Client Area

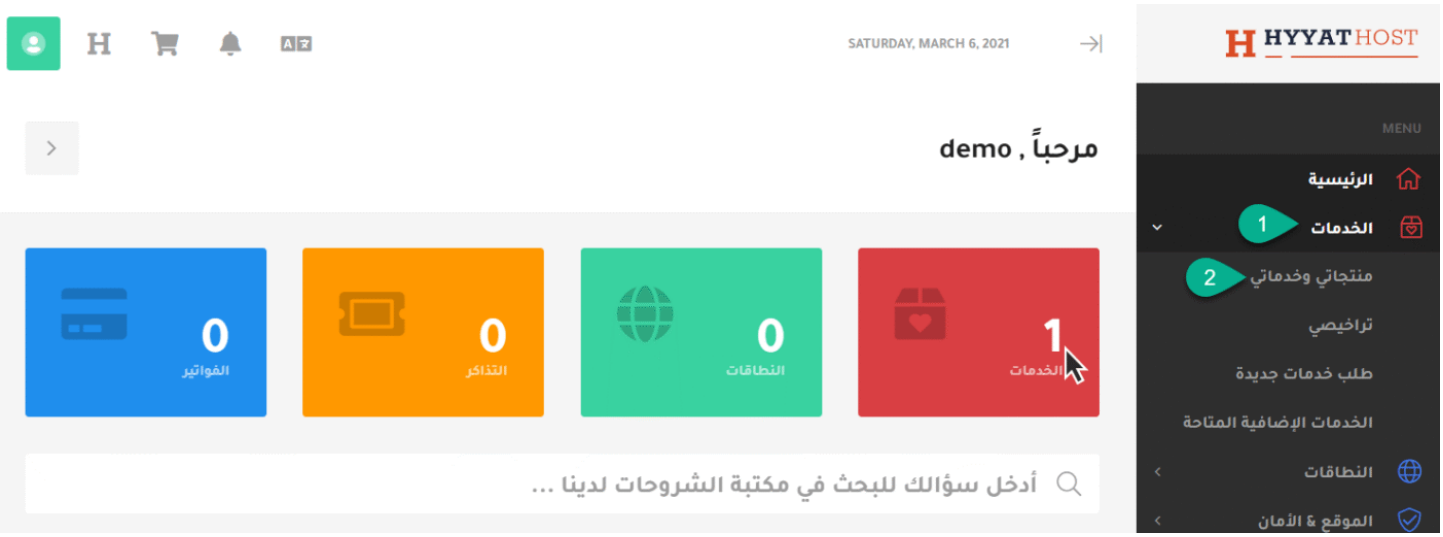
Explanations of use · https://www.hyyat.com/en/knowledgebase/reset-cloud-server/

> **In short:** To reset your cloud server (a hard reboot when it stops responding): log in to the client area, go to Services, then My Services, choose the server, then under Server Quick Actions click Reset and Confirm. It works like pressing the reset button on a computer, so unsaved data may be lost.

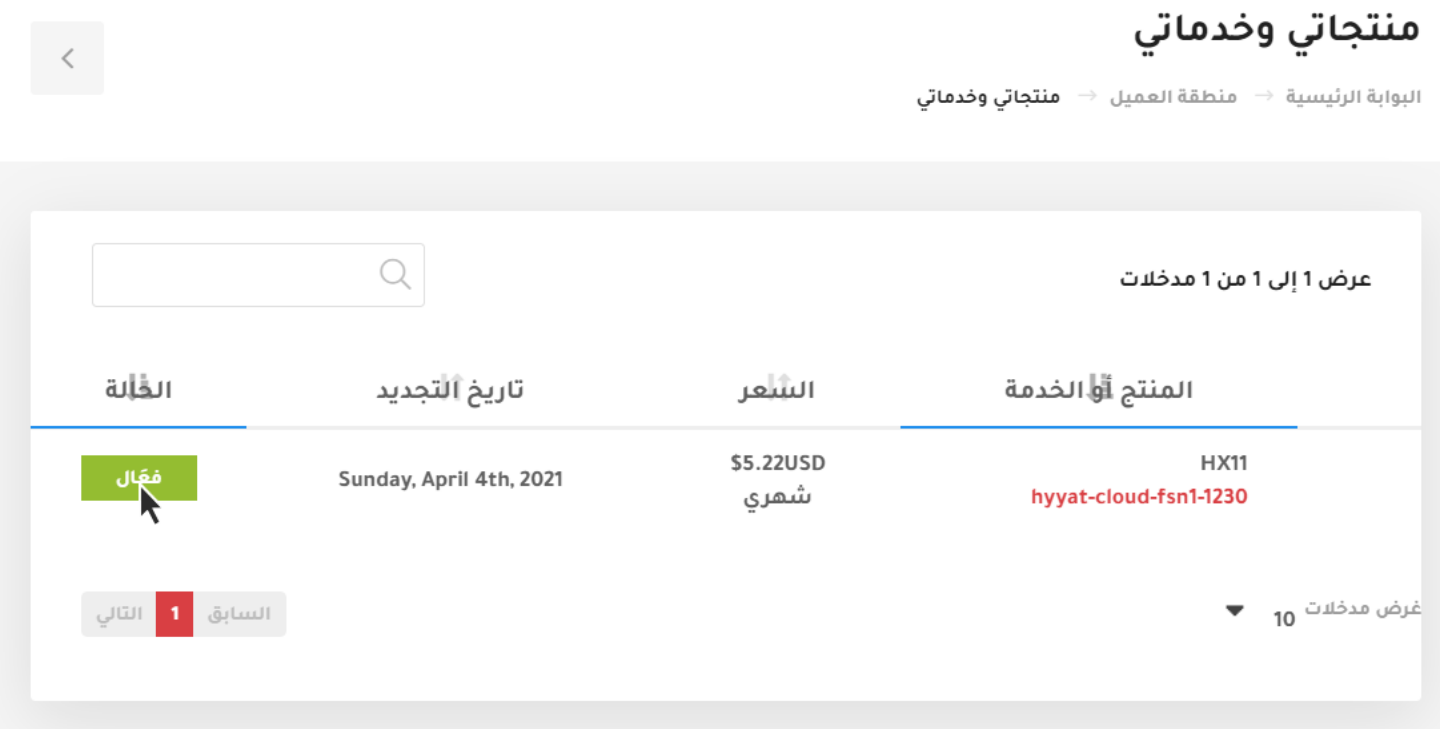
Use Reset when your server does not respond and a normal restart from the operating system is not possible.

1. Log in to the client area (see how to log in to the client area).

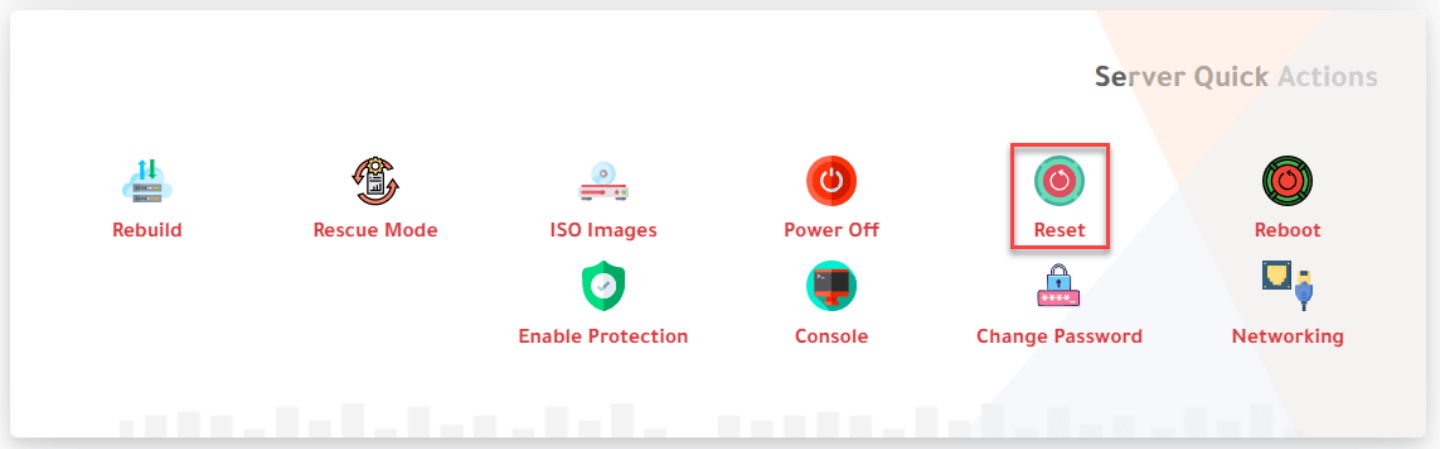
2. Click **Services**, then **My Services**.

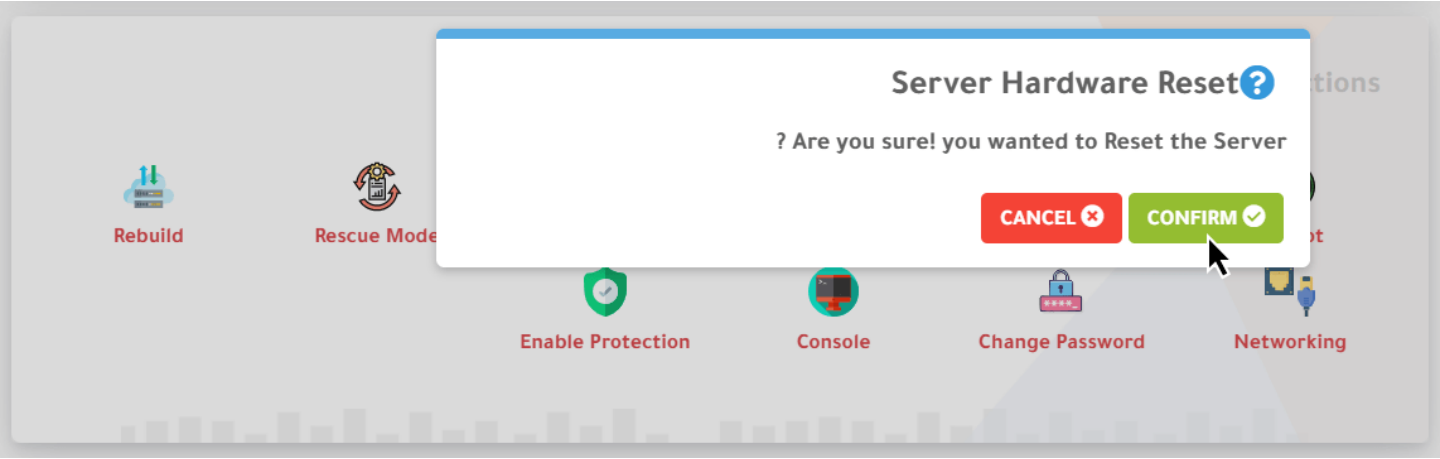


3. Choose the server and click **Active**.



4. Scroll down to **Server Quick Actions** and click **Reset**. A warning asks "Are you sure you wanted to Reset the Server?"; click **Confirm**.





5. A message at the top confirms the server was reset.
