View the Latest Visitors to Your Site in cPanel: Who Came, When and What They Asked For

cPanel Guides · https://www.hyyat.com/en/knowledgebase/view-website-visitors-cpanel/

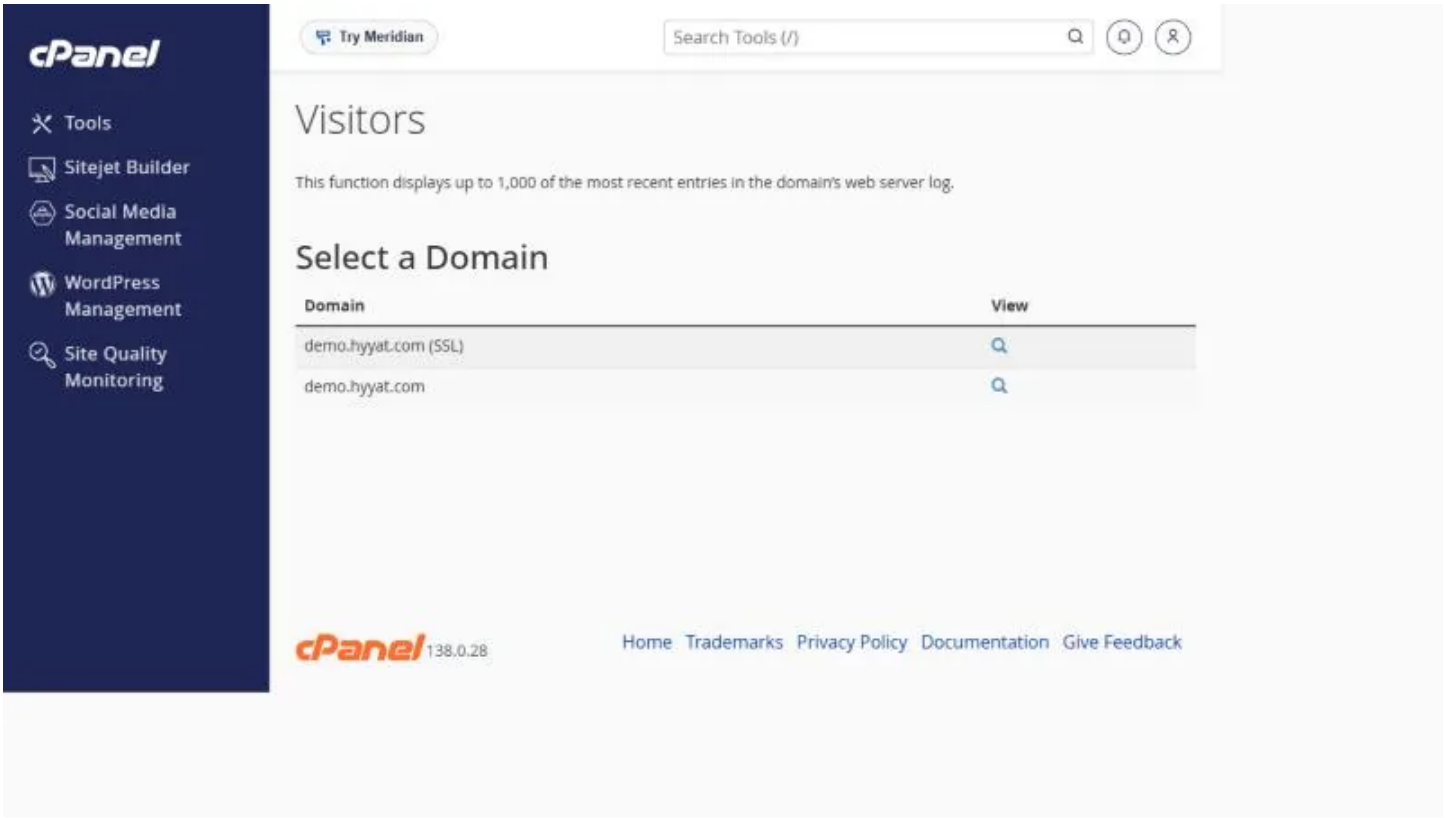
What the tool shows The **Visitors** tool in the Metrics section shows the latest requests that reached your site, taken from the server log, up to 1,000 per domain. Choose the domain and click the magnifier icon to see each request's IP, URL, time and browser.

Embedded media: https://www.hyyat.com/wp-content/uploads/2026/11/hyyat-cpanel-visitors-en.mp4?_=1

Tools such as Google Analytics tell you how many humans visited. The cPanel Visitors tool shows what actually reached the server: visitors, crawlers, password-guessing attempts and requests for pages that do not exist. That makes it a diagnostic tool rather than a marketing one.

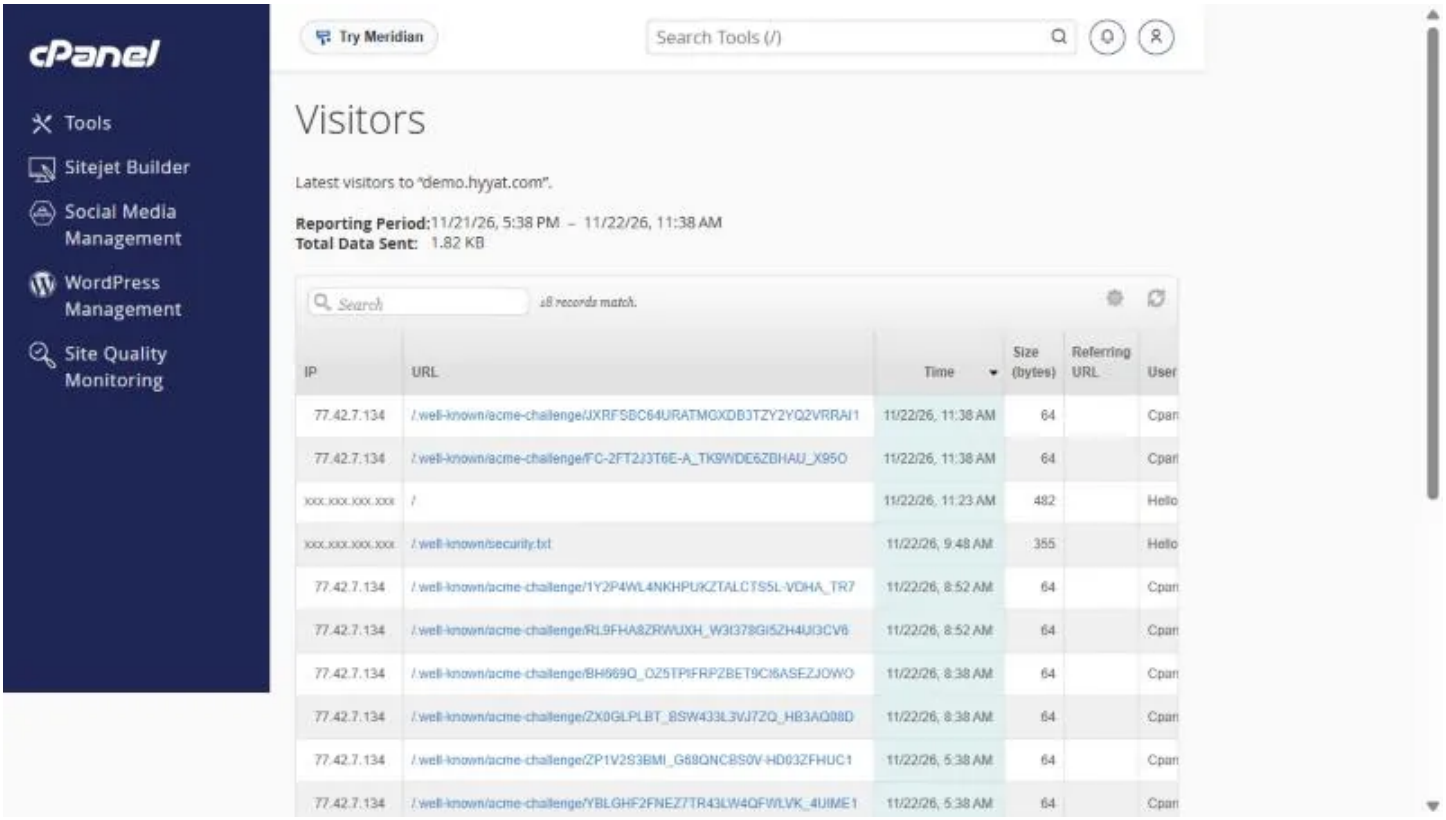
Opening the list

1. **Open Visitors** in the Metrics section of cPanel.
2. **Choose the domain** it may appear twice: once with (SSL) for https visits and once without.
3. **Click the magnifier icon** the latest requests open, newest first.



What each column means

Column	Meaning
IP	The address of the device that made the request
URL	The page or file requested
Time	When it was requested
Size	Bytes the server sent back
Status	Result code: 200 success, 404 not found, 403 forbidden, 500 server error
Referring URL	The page the visitor came from
User Agent	The browser or program that sent the request



We hid visitor addresses in the picture. Repeated requests for `/.well-known/acme-challenge/` are normal; they validate the free SSL certificate.

Patterns worth noticing

What you see	What it usually means
Many requests for `wp-login.php` from one address	Someone trying to guess your WordPress password
Requests for files such as `.env` or `config.php.bak`	An automated scan for sensitive files, see exposed files
Googlebot or bingbot in User Agent	Search engine crawling; normal and useful
Many 404s for one address	An old link that needs a redirect

I want fuller statistics

This list only shows the latest requests. To analyse traffic over months, use an analytics tool such as Google Analytics, or download the full logs from Raw Access.

Frequently asked questions

Why can I not see all of today's visitors?

The tool shows the last 1,000 requests only, and a busy site passes that quickly.

Can I block a suspicious IP?

Yes, with IP Blocker in the Security section, or ask support.

Why is my domain listed twice?

Once for https visits and once for http.

Does the tool slow my site down?

No, it only reads the server log.
