Securing your site with an **SSL** certificate puts it on **https**, protects visitor data and improves your search rankings. **aaPanel** issues a free Let's Encrypt certificate in a few clicks. In this guide from the Hyyat Host team we show the steps.

Hyyat Host virtual servers with NVMe storage, full control and Arabic support are a solid base for your secured sites.

Before you start you need a created site and a domain pointing to your server — see creating a website on aaPanel.

Steps to issue the certificate

1. **Open the site settings** From the `Website` section click `Settings` next to your site.
2. **Open the SSL tab** Open the `SSL` tab.
3. **Choose Let’s Encrypt** Choose `Let’s Encrypt` and select the domain (and the www subdomain).

4. **Issue the certificate** Click `Apply` to issue the free certificate automatically.
5. **Enable Force HTTPS** Turn on `Force HTTPS` to send visitors to https.

The Let's Encrypt certificate auto-renews before it expires, so no periodic action is needed.

Common issues and fixes

- **Issuance fails:** most often the domain doesn't point to your server IP — fix the A record in DNS, wait for propagation and retry.
- **Site shows «not secure» after issuing:** make sure Force HTTPS is enabled.
- **Mixed content:** update image and file links inside your site to https.
