Securing your site with an **SSL** certificate puts it on **https**, protects visitor data and improves your search rankings. **CloudPanel** issues a free Let's Encrypt certificate in a few clicks. In this guide from the Hyyat Host team we show the steps.

Hyyat Host virtual servers with NVMe storage, full control and Arabic support are a solid base for your secured sites.

Before you start you need a created site and a domain pointing to your server — see creating a website on CloudPanel.

Steps to issue the certificate

1. **Open the site page** From the main list click your site's name.
2. **Open the SSL/TLS tab** Open the `SSL/TLS` tab on the site page.
3. **Create a new certificate** Click `Actions` then `New Let’s Encrypt Certificate`.
4. **Issue and install** Click `Create and Install` to issue the free certificate and install it automatically.

5. **Verify https** Open your site over https and check the padlock appears in the browser.

The Let's Encrypt certificate auto-renews before it expires, so no periodic action is needed. CloudPanel usually enables https redirection automatically after issuing.

Common issues and fixes

- **Issuance fails:** most often the domain doesn't point to your server IP — fix the A record in DNS, wait for propagation and retry.
- **Site shows «not secure» after issuing:** make sure http-to-https redirection is enabled.
- **Mixed content:** update image and file links inside your site to https.
