Securing your site with an **SSL** certificate puts it on **https**, protects visitor data and improves your search rankings. **CyberPanel** issues a free Let's Encrypt certificate in one click. In this guide from the Hyyat Host team we show the steps.

Hyyat Host virtual servers with NVMe storage, full control and Arabic support are a solid base for your secured sites.

Before you start you need a created site and a domain pointing to your server — see creating a website on CyberPanel.

Steps to issue the certificate

1. **Open the site management** From `Websites → List Websites` click `Manage` next to your site.
2. **Open the SSL section** Scroll to the `SSL` section on the site management page.
3. **Issue the certificate** Click `Issue SSL` to automatically issue the free Let's Encrypt certificate.

4. **Verify https** Open your site over https and check the padlock appears in the browser.

The Let's Encrypt certificate auto-renews before it expires, so no periodic action is needed. You can also issue a certificate for the panel hostname and mail from the `SSL` section in the main menu.

Common issues and fixes

- **Issuance fails:** most often the domain doesn't point to your server IP — fix the A record in DNS, wait for propagation and retry.
- **Site shows «not secure» after issuing:** make sure you open the site over https, and enable redirect from http to https.
- **Mixed content:** update image and file links inside your site to https.
