aaPanel offers a **One-Click Deployment** feature to install **WordPress** quickly with no manual file upload or database creation. In this guide from the Hyyat Host team we show the full method.

Hyyat Host virtual servers with NVMe storage, full control and Arabic support are an excellent base for WordPress sites.

Explore Hyyat Host VPS plans ←

Before you start you need the panel installed and the web stack ready — see the aaPanel install guide.

Steps to install WordPress

1. **Open the App Store** From the menu choose `App Store`.
2. **Open One-Click Deployment** Enter `One-Click Deployment`.
3. **Choose WordPress** Choose `WordPress` from the ready apps list.

4. **Enter the domain** Type the domain and the database is created and WordPress downloaded automatically.
5. **Finish setup** Open the domain in the browser and complete the WordPress installer (site title and admin).

If you don't find One-Click Deployment, you can create a site and database manually, upload WordPress to the root folder and run the installer.

What next after installing?

- Issue a free SSL certificate and enable https — see issuing SSL on aaPanel.
- Install a caching plugin to speed up the site.
- Set up backups — see backups on aaPanel.

Common issues and fixes

- **Deployment fails:** make sure the web stack (PHP, MySQL) is installed and there are enough resources.
- **Site opens with a white page:** check the PHP version from the site settings and set it to 8.1 or newer.
- **You want to migrate an existing site:** create a site and database, upload your files and import the database.

Next step

- Issue a free SSL certificate and enable https.
- Set up backups from the start.
- See the VPS control panel comparison to learn each panel's strengths.

And if you'd like us to install and set up WordPress for you, open a support ticket — we reply within 24 hours at most.

Frequently asked questions

How do I install WordPress on aaPanel?

From the App Store open One-Click Deployment, choose WordPress and enter the domain and it installs automatically.

Do I need to create a database manually?
No with One-Click Deployment; it creates the database automatically.

What should I do right after installing?
Issue a free SSL certificate, install a caching plugin, and set up backups.
