Install WordPress on CloudPanel — Step by Step 2026

CloudPanel · https://www.hyyat.com/en/knowledgebase/install-wordpress-cloudpanel/

In short To install WordPress on CloudPanel: click Add Site and choose WordPress, enter the domain, site title, admin user, password and email, then Create. The panel creates WordPress and its database automatically within a minute.

CloudPanel offers a ready **WordPress** site type that creates the site and its database automatically, with no manual file upload. In this guide from the Hyyat Host team we show the full method on the fast nginx stack.

Hyyat Host virtual servers with NVMe storage, full control and Arabic support are an excellent base for WordPress sites.

Before you start you need the panel installed and a domain pointing to your server — see the CloudPanel install guide.

Steps to install WordPress

1. **Open add-site** From the main interface click `Add Site`.
2. **Choose WordPress** Choose `Create a WordPress Site`.

3. **Enter the site details** Type the domain and site title, the admin username, a strong password and the email.
4. **Pick the PHP version** Choose a recent PHP version (8.1 or newer) if asked.
5. **Create** Click `Create` and wait for it to finish, then log in at `/wp-admin`.

The panel creates and links the database and installs WordPress automatically. After creation, issuing an SSL certificate right away is recommended.

What next after installing?

- Issue a free SSL certificate and enable https — see issuing SSL on CloudPanel.
- Take advantage of nginx speed and enable suitable caching for WordPress.
- Set up backups — see backups on CloudPanel.

Common issues and fixes

- **Creation fails:** make sure the server has enough resources and the domain isn't already added.
- **Site opens with a white page:** check the PHP version from the site page and set it to 8.1 or newer.
- **You want to migrate an existing site:** create a general PHP site, upload your files and import the database instead of the ready type.

Next step

- Issue a free SSL certificate and enable https.
- Set up backups from the start.
- See the VPS control panel comparison to learn each panel's strengths.

And if you'd like us to install and set up WordPress for you, open a support ticket — we reply within 24 hours at most.

Frequently asked questions

How do I install WordPress on CloudPanel?

From Add Site choose Create a WordPress Site, enter the domain and admin details then Create.

Do I need to create a database manually?

No, the WordPress site type creates and links the database automatically.

What should I do right after installing?

Issue a free SSL certificate, enable caching, and set up backups.
