One of the strongest features of **CyberPanel** is installing WordPress in **one click** with the official LiteSpeed Cache plugin that greatly speeds up your site. In this guide from the Hyyat Host team we show the steps from creating the site to logging into the WordPress dashboard.

WordPress performance starts at the server. Hyyat Host virtual servers with fast NVMe storage and full control give your sites a fast foundation, with Arabic support.

Before you start you need a site created in the panel — see creating a website on CyberPanel, with the panel installed per the CyberPanel install guide.

Steps to install WordPress

1. **Open the site management** From `Websites → List Websites` click `Manage` next to your site.
2. **Open the WordPress section** Scroll to the `Application Installer` section and choose `WP + LSCache`.

3. **Enter the site details** Type the `Blog Title`, `Login User`, `Login Password` and `Email`.
4. **Set the path** Leave `Path` empty to install WordPress at the domain root.
5. **Install** Click `Install Now` and wait for the install to finish.

After install you log into the WordPress dashboard at `https://your-domain/wp-admin` with the admin details you entered.

Enable LiteSpeed Cache for speed

WordPress on CyberPanel comes with the **LiteSpeed Cache** plugin installed. Enable it from the WordPress dashboard (Plugins) and configure it to speed up pages with server-level LSCache — an advantage CyberPanel has over traditional panels.

Common issues and fixes

- **Install fails:** make sure the site is created correctly and the folder has proper permissions, then retry.
- **White page after install:** check the PHP version (use 8.1 or newer) from the site management.
- **Cache plugin not showing:** install LiteSpeed Cache manually from the WordPress plugin repository.
