Backups: Full Off-Site Backups of Your VPS

Hyyat VPS Control Panel · https://www.hyyat.com/en/knowledgebase/vps-external-full-backup/

In shortA backup takes a full copy of your machine and stores it **off the server**, protecting you even if the machine itself fails. This is stronger than a snapshot, which stays on the same server. It is enabled from the service upgrade page. For serious protection of your data, enable it.

What is your server worth without its data? **Backups** protect your work: a full copy of your machine stored **off the server**, so if a failure or a big mistake happens, you restore everything.

Backup vs snapshot

This is a fundamental difference: a snapshot is temporary and on the same server, suited to a quick rollback of a change. A backup is stored **off the server**, so it protects you even if the machine fails entirely. Use both for different purposes.

How do I enable backups?

Off-site backup is a feature added to the service. Enable it from the **service upgrade page**, and then your backups appear in this tab, with restore and download available.

Backups affect billing. To enable or ask about them, open a support ticket and we reply within 24 hours at most.

Summary

- A backup is a full copy stored off the server.
- It protects you even if the machine fails, unlike a snapshot.
- It is enabled from the service upgrade page.

For a quick rollback of a simple change, snapshots are enough.

Frequently asked questions

What is the difference between a backup and a snapshot?
A backup is stored off the server and protects you even if the machine fails. A snapshot is temporary and on the same server, for a quick rollback of a change. Use both for different purposes.

How do I enable backups?
It is a feature added to the service from the service upgrade page. Open a support ticket to enable or ask about it.

Can I restore a backup myself?
After enabling, your backups appear in the tab with restore and download available. And if you need help, our team is with you.

How often is a backup taken?
It depends on the service setup. Open a ticket to find the backup schedule that suits you.

Do backups slow my machine?
Backups run efficiently and do not noticeably affect your machine daily work.
