One-Click Apps: Install a Ready WordPress on Your VPS

Hyyat VPS Control Panel · https://www.hyyat.com/en/knowledgebase/vps-one-click-apps-install-wordpress/

In short The “One-click apps” tab installs a fully ready app on your machine in one click, saving you the long manual setup. WordPress is available now: click install, and once it finishes, open your machine address in the browser to complete setup. Note that the install starts from a clean disk, like a reinstall.

Setting up a WordPress site from scratch means installing a web server, a database and configuring many things. The **One-click apps** tab shortens all of that: we prepare the app ready on your machine, and you finish setup from the browser only.

How do I install an app?

- Open the **One-click apps** tab in the control panel.
- Choose the app (such as **WordPress**) and click install.
- Wait for the install to finish, then open your **machine address (IP)** in the browser to complete setup.

The machine becomes ready within minutes, then WordPress setup is a few simple browser steps: site name, user, and password.

Careful: a one-click install starts from a clean disk, exactly like a reinstall. Use it on a new machine or after saving what matters.

When to use one-click apps

- You want a WordPress site quickly with no manual setup.
- You are starting a new project on a clean machine.
- You prefer a ready, configured setup over installing step by step.

Summary

- One-click apps install a ready app on your machine in one click.
- WordPress is available now; after install, open your machine address to finish setup.
- The install starts from a clean disk — use it on a new machine.

If you need to reach the machine after install, use the Console.

Frequently asked questions

What are one-click apps?
They are ready apps we fully install on your machine in one click, saving you the manual setup. WordPress is available now, and more apps may be added later.

Does installing an app wipe my data?
Yes, the install starts from a clean disk, exactly like a reinstall. Use it on a new machine or after saving everything that matters.

How do I finish WordPress setup after install?

Once the install finishes, open your machine address (IP) in the browser, and the simple WordPress steps appear: site name, user and password.

How long does the install take?

Usually a few minutes until the machine is ready. Then you finish setup in the browser in a few more minutes.

Why does the site open on an IP and not my domain?

Because the machine is new and you have not pointed your domain to it yet. After setup, point your domain to your machine address so the site works on your name.
