When Should You Move from Shared Hosting to a VPS? 7 Clear Signs

Web Hosting · https://www.hyyat.com/en/knowledgebase/when-to-move-from-shared-hosting-to-vps/

In short Move to a VPS when resource faults keep coming after you have optimised your site, when you need software or settings shared hosting does not allow, when you manage many client sites, or when your project requires full isolation. If none of these apply, Business or WordPress Hosting with more resources may be enough, for less money and with no server to manage.

Shared hosting suits most sites at the start: it costs less and you do not have to manage a server. As your site grows, it may reach its limits. A VPS gives you dedicated resources and full control, but it needs managing. These signs help you decide at the right time, not too early and not too late.

7 signs you need a VPS

1. **Resource faults keep coming after optimising.** You turned on caching and trimmed plugins, but Resource Usage still shows memory and process faults every day. Read the 508 error guide.
2. **You have many visitors at the same time.** A store during a sale, or a learning platform at exam time, needs resources it does not share with anyone.
3. **You need custom software or settings,** such as running Node.js or Python as a permanent service, Redis, Docker, or PHP and database settings that shared hosting does not allow.
4. **You need root access** to install what you want and tune the server yourself, which shared hosting does not offer.
5. **You manage many client sites.** If you are a designer or agency, a server with a control panel gives each client a separate account.
6. **You need full isolation.** Some projects must not share a server with other sites, for security or regulatory reasons.
7. **Your application sends a lot of email.** Shared hosting has an hourly sending limit to protect the server. On a VPS you control sending yourself, with reverse DNS and domain authentication.

Before a VPS: is a middle option enough?

If your only problem is resources, and you do not need root or custom software, a bigger managed plan may be enough, and we keep managing the server:

Option	Suits you if	Who manages the server?
Business Hosting	A company site and its email needing more resources	We do
A higher WordPress Hosting plan	One or more WordPress sites needing more resources	We do
VPS	You need dedicated resources, root and custom software	You, or us with the management service
Dedicated server	A large project that needs a whole server to itself	You, or us with the management service

What changes for you after moving to a VPS?

- **Management is your job:** updates, security, backups and resource monitoring. Start with securing your server after delivery.
- **Control panel:** install cPanel with a paid licence, or a free panel. Compare them in the best VPS control panels.
- **Rather not manage it yourself?** Our server management service handles setup, security and monitoring for you.
- **Moving:** your sites move the same way as between hosts. See moving your site without downtime , and ask us in a ticket for help.

Summary

- Do not move to a VPS just because your site is slow: fix the causes first.
- Move when resource faults keep coming, or you need root, custom software or full isolation.
- A VPS needs managing; if you lack the experience, add the management service.

Frequently asked questions

What is the difference between shared hosting and a VPS, in short?
On shared hosting you share server resources with other sites and we manage the server. On a VPS you have dedicated resources and full root access, and you manage it yourself or add the management service.

Is a VPS always faster than shared hosting?
Not always. A small, untuned VPS can be slower than good shared hosting. Speed depends on resources, tuning and how well the site is built.

Do I need experience to manage a VPS?
Yes, you need to know Linux, security and updates. If you do not, choose the server management service, or stay on managed hosting with more resources.

Can I install cPanel on a VPS?
Yes, with a paid monthly licence, or you can choose a free panel. See the cPanel and WHM on VPS guide.
